

HOW TO MAKE A 5-POINTED STAR – Geometric Design – Decagons

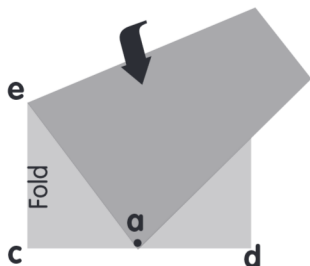

1. Start with a **rectangular** piece of paper.

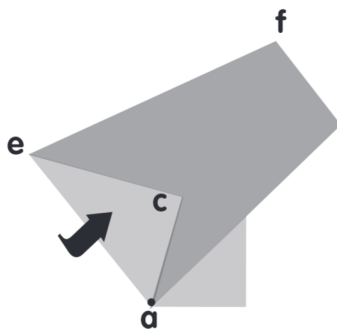

2. Fold the paper in half, short end to short end. Line up the edges and make a firm crease.

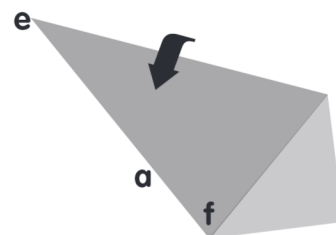

3. Make a mark at the **centre** of the bottom of the folded paper.

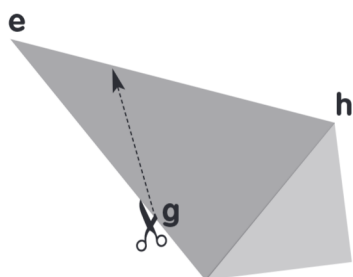

4. Fold the top left corner **a** down to the centre mark. Make a firm crease.

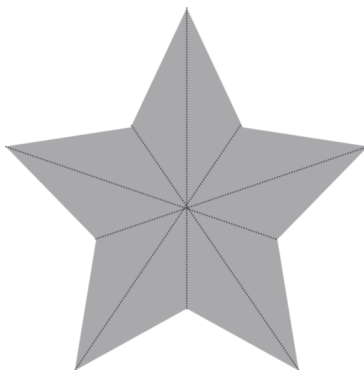

5. Fold the lower left corner **c** up along the edge of the last fold **ea**. Make a firm crease.

6. Fold the top right corner **f** down so it lines up with fold **ea**. Make a firm crease.

7. Cut off the upper part of the folded shape. Start at **g** and cut on an angle to the outer edge **eh**. The sharper the angle, the more pointed your star will be.

8. Unfold the paper.
