Follow My Code

CREATE a Coding Dance by sketching visual symbols such as arrows, spirals, and footsteps to create a pattern that you and others will follow. Or make small characters from Model Magic® and use them to follow your dance code.

PRESENT your code to others. Can they tell how to move the characters by following the code you sketched? Are the visual instructions clear?

RESPOND to each other's ideas. Sometimes sketched codes don't work well when put into action. Computer programmers learn from mistakes as they "debug" code. What symbols or patterns need to be revised?

CONNECT this unplugged coding project with potential careers in computer programming and visual communications. How does this activity demonstrate that visuals convey meaning?
