

# Weather Watchers

## STEAM Connections

Science Technology Engineering Arts Mathematics

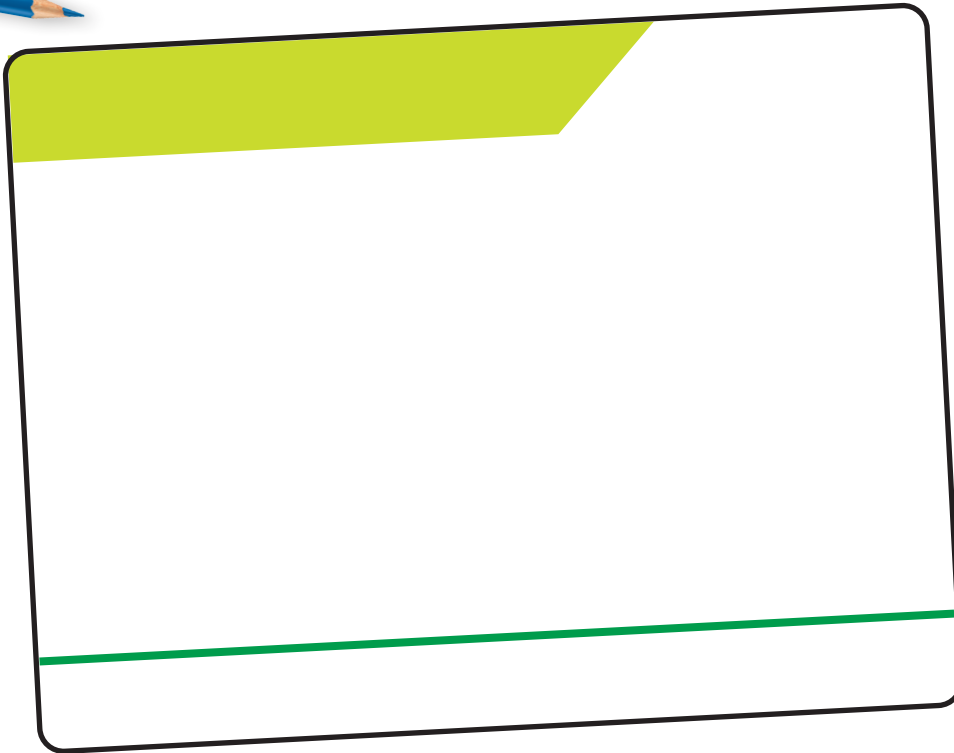

**RESPOND** to current weather conditions around the world as if you are meteorologist. Watch conditions near and far to see where there is unusual or extreme weather occurring. Make informed predictions of what might happen in the days ahead. What has made the weather you are focusing on newsworthy?

Elise W.

**CREATE** a drawing that shows unusual or extreme weather that's occurring somewhere in the world this week. Write a news headline for your visual weather report.

Hannah K.

Nikki B.

**PRESENT** your weather art, news report headline, and facts you learned about this weather condition. Discuss the impact it's having or had on people and places as if you are a meteorologist working for a weather reporting station.

**CONNECT** extreme weather with other changes in the environment. Discuss how patterns in temperatures, floods, wildfires, and hurricanes have changed over the past few decades. What predictions do meteorologists provide for coastal areas and low-lying islands in the upcoming decades?
